*Photochemical reactions, Activated carbon, Nickel.

The photochemical decomposition of benzene and acetone adsorbed on active nickel and activated carbon was compared with their behavior in gaseous state. The experimental equipment permitted measurement of the increase of pressure due to secondary decomposition products which indicated the results of the experiments, in which light produced by a spark between zinc and aluminum electrodes was permitted to act on the charge either unfiltered or after elimination of light of certain (Chemistry--Physical, TT, v. 6, no. 7) (over)
